## Dinghy Wheels

### Selecting Your Model

DaNard Marine currently offers two models of Dinghy Wheels. DW-1 and DW-3. The primary difference are the mounting base and arm dimensions.

DW-1

DW-3

The DW-1 is designed for use on a straight/flat transom inflatable or runabout. (meaning there is **no** lip on the top or bottom edge of the transom). This model is ideal for smaller inflatables and runabouts up to 400 lbs. The DW-1 base dimensions measure 11 1/2" L x 2 5/8" W x 1" H. The DW-1 arm dimensions measure 20" L x 1" W x 3/4" H. When installed, this base provides an 1/8" offset from the transom for the arm/wheel assembly to operate. \* See installation instructions for more detail.

DW-1

The DW-3 is designed for use on "RIB" (Rigid Inflatable Boat) or runabout that has an upper or lower lip on the transom.

This model is ideal for larger/heavier inflatables and runabouts up to 700 lbs.

The DW-3 base dimensions measure 11 1/2" L x 2 1/2" W x 1 9/16" H.

The DW-3 arm dimensions measure 20" L x 1" W x 1" H.

When installed, this base provides a 5/8" offset from the transom for the arm/wheel assembly to operate. \*See installation instructions for more detail.

DW-3

Please note the DW-3 offers several hole patterns for mounting as many RIB's have false floors and or contours. We also include heavy duty Stainless pad eyes for a lifting sling and or tie-offs. The pad eyes also act as a backing plate for the base.
